## **ETI EXPANDS OPPORTUNITIES TO WORK WITH U.S. GOVERNMENT**

### ***ETI Awarded General Services Administration Contract***

**AUSTIN, Texas – July 20, 2006** – ETI (Evolutionary Technologies International, Inc.), a global provider of data integration solutions, has been approved for direct purchase by government buyers on the General Services Administration (GSA) Schedule (#GS-35F-0409S). GSA Schedules, also referred to as the Federal Supply Schedules, provide authorized federal government employees with a procurement venue for goods and services, conveniently, and at the best price. This key federal approval will make it easy for government agencies to procure ETI's multiple products and services, including its flagship product ETI Solution®.

ETI's current government clients include the U.S. Department of Defense (DoD), multiple agencies of the U.S. intelligence community, the Air Force and the Navy. ETI will continue to build its momentum serving the government sector as part of the GSA Schedule.

"The government sector has been important to our business for many years and now we can work on a direct purchase basis with these customers," said ETI President and CEO Ron Baker. "The GSA Schedule simplifies government agencies' access to our product and allows us to focus on providing them with the most efficient solution to their data integration needs."

ETI already has a long track record of success with the federal government. The DoD leveraged ETI's flagship product – ETI Solution V5 – to generate high performance connectors used to tie together hundreds of procurement related legacy databases for the DoD Standard Procurement System (SPS) program, one of the largest service-oriented architecture (SOA) deployments in the world, used for buying everything from office supplies to military battlefield equipment. As part of that program, ETI Solution will eventually support close to 50,000 users at 350 military facilities around the world. According to project assessments, the DoD SPS experienced a 50 percent reduction in development time, at a cost savings of approximately \$2 million over a 21-month period and recently garnered ETI a 2006 Microsoft Partner Program Award for outstanding customer service.

Recognized as "Champions" by Bloor Research, ETI was deemed especially suitable for organizations with multiple source systems, complex business logic or ones that require access to unusual data sources. To that end, ETI has worked on multiple government projects including a DoD project that facilitated the education of children of military service members and DoD civilian employees all over the world, as well as a defense medical logistics project that was both an information systems development and a sustainment program improvement activity.

ETI products provide high performance data integration capabilities for data synchronization and migration, and for composite data services for SOA initiatives. As a complement to ETL, EAI, EII, SOA and data warehousing technologies, ETI's data integration platform extends the value of IT investments by providing high performance connectivity and transformations as organizations combine legacy and proprietary data sources with current technologies.

### **About ETI**

ETI (Evolutionary Technologies International, Inc.) is a global provider of enterprise data integration solutions for government IT organizations and Global 1000 companies including clients like Caterpillar, the Department of Defense, Royal Bank of Canada and Hallmark. ETI provides software and services that automate the seamless exchange of data between incompatible systems. Organizations around the world rely on ETI to implement applications ranging from SOA, ETL, EAI, EII, CRM, ERP, compliance reporting and data warehousing. Founded in 1991, ETI is based in Austin, Texas with additional offices in the United States, Canada, Europe and Australia. For more information visit [www.eti.com](http://www.eti.com).
